

Gumstix Overo™ COM: Signals

This document is being published as a general reference on general or special purpose interface line usage to aid:

- hardware engineers needing design-support for expansion boards, and
- programmers writing software that takes advantage of signal multiplexing.

For a listing of features available on the models of Overo COMs, please refer to [Overo Feature Sheet](#)

For sample layout and schematics of expansion boards, and mechanical specifications of all Gumstix® computers-on-module, please see [Hardware Publication](#)

For instructions on setting up a software build environment, see [Software Build Instructions](#)

General comments

The general philosophy for external signals is to make them available with minimal alterations from the processor. GPMC is used on board only by the NAND of the PoP.

Unless otherwise noted, signals are from the OMAP35xx, and all GPIO, EM, Reset and Interrupt signals are 1.8V.

Signal names are determined first by the source GPIO, then the standard usage on Gumstix Overo COMs or as allocated for the most common external interface modules. Unless otherwise noted, these signals are available for alternate usage as GPIO as long as the kernel is built in a way to avoid conflicting interpretation of the lines. Please refer to [TI OMAP Documentation](#) for a description of the available alternate signals and usage by Package-on-package NAND.

A/D lines feed directly to the TPS65950 and use a 2.5V Reference against AGND
Headset signals are treated as “Analog mode: pseudo-differential.”

On board signals

On board microSD signals (used for boot)	
MMC1	GPIO_120:125
Wifi and bluetooth module	
GPIO164_BT_nRESET	GPIO164
GPIO16_W2W_nRESET	GPIO16
GPIO54_BTWI_nPOWERON	GPIO54
USB Control	
USBH Signals	GPIO24:29, GPIO_177:182 Note: GPIO_24 is USBH_CLK
GPIO183_USBH_nRESET	GPIO_183
Bluetooth interface	
GPIO_BTUART2	GPIO_140:143
GPIO_BT_BSP4	GPIO_152:155 (future use)
Wifi interface	
GPIO_WLAN_MMC2	GPIO_130:139
4030 interrupt	
FAB revisions <=2410	GPIO112_4030 IRQ
FAB revisions >=2516	GPIO_0_4030 IRQ
GPIO_149_START_ADC	GPIO_149
LED Controls on board	
D1: Blue	WLAN Active from the wifi module
D2: Green	Power
D3: Blue	LED_B Signal from TPS65950, FAB revisions >=2765
Board description	
	GPIO_126:129 (for future use)

Signals available through headers

Serial Ports

Revisions

V 1.1

- 1) Page 1: Reference to TI OMAP35xx for complete list of alternate uses.
- 2) Page 1: Reference to TI OMAP35xx usage of PoP signals.
- 3) Page 2: Identified CBB package and use of GPMC and SDRC on-board
- 4) Page 3: GPIO174_SPI1_CS0 *IS NOT* reserved for future use in an SPI1 connection to a bluetooth module.
- 5) Page 7: Corrected signal names to reflect GPIO 10 and GPIO 186.

V 1.2

1. Page 3: Corrected GPIO_126:129 to be GPIO_120:125
2. Page 3: Corrected GPIO164 for GPIO16_W2W_nRESET

V 1.3

1. Page 6: Corrected GPIO31_WAKEUP (It can be used as a GPIO)
2. Page 9: Added JTAG signals table

V 1.4

1. Page 3: Description of LEDs on board
